Continuation of 11. does NOT place the application in condition for allowance because: Applicant's request for reconsideration filed on 04/08/2010 is acknowledged, but is not persuasive. Applicants argue on pages 08-09 that "The combination proposed by the Examiner changes the principal of operation of Malik in that the embodiments of Mailk see to compress mail attachments when network traffic is high (and not compress when the traffic is low). In sharp contrast, the modification according to claim 1, would require no compression when the processing load is high, given that the Examiner equates the network traffic of Malik to the claimed processing load. Thus, the principal of operation of Malik would be changed by the modification proposed by the Examiner, and accordingly is impermissible under the applicable law/practice". However, the principal of operation would not be changed by the combination of Malik and Weller. Specifically, the claim languages merely state that if the processing load is above a certain threshold, to not send data in a compressed format. There is no diction in the claim language to equate such a threshold to a "processing load [that] is high". Weller teaches the concept of no compression when a load is above a threshold. There would no change of principal of operation with the combination of Malik and Weller because both deal with compression in client/server data transfers.
